

SCIENCE FOR A PURE ENVIRONMENT

Idreco has a worldwide presence with more than 800 plants dedicated to the treatment of water, flue gas and incineration systems. Continuous innovation

Founded in 1976 with a vocation for diversification, due to the foresight of founder Paolo Stafforini, Idreco of Voghera has continued to grow by adding areas of specialization and an innovative spirit that has also been passed on to the second generation, represented by brothers Emilio and Carlo Stafforini, at the top of the company after their father passed away six years ago. This is how today the company is a leader in the fields of primary industrial water treatment, flue gas and incineration systems; it is a supplier of equipment for industrial thermal processes, technologies and applications for the sugar industry, and telecommunication and satellite transmission systems. In addition, testing of equipment capable of capturing Pm10 and Pm5 particulate matter to “clean” cities is already in its final stages. Since its origins, moreover, Idreco has produced and sold pulverized ion-exchange resins used to supply, under the Idreco Suprex brand, some 20 nuclear power plants around the world. The production unit for this resin, Interwat, is located just a few meters

Tailor-made installations are a consequence of the nature of Idreco, which acts as an Epc contractor

away from the Voghera headquarters and has an attached demineralization plant and laboratory for testing products. “There are more than 800 plants of different kinds and sizes that Idreco has successfully supplied around the world since the 1970s, and none is the same as another,” explains Carlo Stafforini, emphasizing

his father’s entrepreneurial ability that has managed to hand over to his sons such a diversified business that is able to absorb the ups and downs of the markets without affecting the company’s solidity. “Tailor-made plants are a consequence of the nature of Idreco - adds the entrepreneur - which acts as an Epc contractor. Customers expose us their needs regarding the type of product to be processed, and Idreco studies, engineers, and supplies all the plant components while also performing installation, start-up, and after-sales services.” Idreco, certified Iso 9001 and Iso 14001, has its own offices in Switzerland, the U.S. and South America and is considering an opening in the United Arab Emirates. It has agents and representatives all over the world.
